OBJECTIVE

B.Tech AI/ML student at IPU Delhi with hands-on experience in Deep Learning, NLP, and Data Analytics. Skilled in building end-to-end ML pipelines, transformer-based NLP models, and computer vision systems using TensorFlow, Keras, and Hugging Face. Eager to apply these skills to derive actionable insights and contribute to data-driven decision-making in a fast-paced organisation.

EDUCATION

Dr. Akhilesh Das Gupta Institute of Professional Studies (ADGIPS, IPU Delhi)

Aug 2023 – May 2027

B.Tech — Artificial Intelligence and Machine Learning | New Delhi, India

- CGPA: 8.86/10.0 | Coursework: Data Structures, DBMS, Statistics, Machine Learning, Deep Learning, NLP, Computer Vision

TECHNICAL SKILLS

Languages: Python, SQL, Pandas, NumPy, JavaScript (basics)

AI/ML Frameworks: Scikit-learn, TensorFlow, Keras, Hugging Face Transformers (DistilBERT, BioBERT)

Data & Analytics: Power BI, Tableau, MySQL, Excel, EDA, Feature Engineering, SMOTE

Specialisations: Classification, Clustering, Regression, NLP, Sentiment Analysis, Computer Vision

Tools & Platforms: Streamlit, FastAPI, Docker, Jupyter Notebook, Git/GitHub, MySQL Workbench

Core Competencies: NLP, Computer Vision, Deep Learning, Data Analysis, MLOps

PROJECTS

SentiScope: Real-Time Multilingual Sentiment Analysis Engine

Python · DistilBERT · Hugging Face · Streamlit · VADER · TextBlob · LDA · FastAPI · Matplotlib

- Built a hybrid NLP pipeline combining VADER/TextBlob with a fine-tuned DistilBERT model trained on 50,000+ tweets, improving multilingual sentiment accuracy from 82% to 91% through learning-rate warm-up and mixed-precision training.
- Applied LDA topic modelling to auto-cluster tweets into 8 semantic themes; deployed a Streamlit dashboard with live filtering, trend charts, and word-cloud visualisations for non-technical stakeholders.
- Exposed a FastAPI /predict endpoint returning sentiment label, confidence score, and top-3 topic probabilities in under 150 ms, enabling seamless downstream integration.

MediSight: Medical Image & Clinical Report Intelligence System

Python · ResNet-50 · BioBERT · TensorFlow · Keras · NER · MySQL · Power BI · Pandas

- Trained a ResNet-50 CNN on 5,000+ chest X-ray images (Normal / Pneumonia / COVID-19) via transfer learning and data augmentation, achieving 88% accuracy and 0.91 AUC-ROC.
- Fine-tuned BioBERT for Named Entity Recognition on 3,000 doctor notes, extracting diagnoses and medications with an 87% F1-score; designed a 6-table MySQL schema with 20+ queries using CTEs and window functions.
- Built a 30-day readmission risk predictor (85% ROC-AUC) with SHAP explainability; delivered a Power BI dashboard with drill-through filters that reduced analyst preparation time by 35%.

CERTIFICATIONS

The Complete Python Bootcamp: Zero to Hero — Udemy

2026

Python fundamentals, OOP, file I/O, web scraping, and data analysis workflows.

Data Analytics Certification — Udemy

2025

EDA, statistical analysis, SQL for analytics, Power BI dashboarding, and data storytelling.

ACHIEVEMENTS

Kaggle Competitive ML

- Top 10% finish in Kaggle Titanic ML Competition out of 14,000+ teams; actively competing in tabular and NLP challenges using ensemble methods and deep learning baselines.

LeetCode Problem-Solving

- 100+ problems solved spanning Arrays, Strings, SQL, Hash Tables, and Dynamic Programming; consistent weekly contest participation to strengthen algorithmic thinking.
